SCA Group Site Services Solution

The SCA Group can offer a Multi-Disciplined Site Services provision for Single Source Management in fixed site locations across the UK

SCA's dedicated Site Services management team have worked extremely hard to be able to offer an all-encompassing solution to the management of multiple trades in a wide variety of locations, and with an unlimited combination of services. Our wide and varied skill set allows us to present to the client a professional solution to all manner of problems, catering for a range of requirements, strategically designed to offer a full package that ensures continuous site operations and minimal disruption to ongoing productivity or performance.

The cost and time saving benefits of single management are obvious, and SCA have created a service proposition that can cover multiple trades to successfully harness these advantages, and deliver to the client a package that achieves ultimate goals, improved efficiency, project completion, and / or higher standards of safety and workmanship.

With permanent offices in the North (Scunthorpe) and South of the country (Bournemouth), and satellite set-ups in between, SCA offer true UK-wide coverage for all of our main service capabilities – industrial coatings, rope access, specialist access and containment, as well as many, many more associated trades. Packages are delivered on an individual trade basis, or as a Multi Discipline offering, all determined by the nature of the contract or ongoing works.

Some of the specific trades that SCA can offer include:

- Industrial surface preparation and coating
- Brickwork repairs
- Geotechnical Services
- Offshore facility maintenance
- Confined Space working
- Landscaping, Devegetation and Arboricultural Services
- Commercial access scaffolding
- Electrical and Mechanical Facility maintenance
- Specialist Containment and Weather Protection

So if there is a stretch of railway line that needs tending to due to overgrowth of surrounding greenery, or a cliff face that needs protection from landslips or falling debris, or an industrial facility that is in need of a maintenance service provider, we have the skills, qualifications and expertise to create the perfect solution for you.

We can combine all or some of our trades to tailor-make a solution for the management of a fixed site location, utilising experienced and qualified supervision and technicians to carry out specialised access or surface preparation activities for example. These provisions lend themselves perfectly to repair and refurbishment, or protective services, to name a few, and can create the perfect solution for your needs.

All of our operatives not only cover the access, servicing or coating of various on-site assets, structures, or buildings, but can also provide general maintenance or upkeep of the surroundings. This would generally take the form of devegetation activities, repointing brickwork, blockwork or stonework, tree removal, and everything else in between where due care and attention is required to ensure operations continue efficiently on site.

The SCA Group is Link-Up approved, are full members of the NASC, and has achieved IRATA membership. This gives the company strength and suitability to working in testing and potentially dangerous environments such as on the country's network of railway lines and stations. All operatives are trained and highly skilled to various qualifications, such as PTS and ICATS, meaning we have confidence knowing we could be your next partnered contractor, and the only one you will ever need again.
